

Your complete solution for the modern workplace

It's a new age of disruption. Employees demand technology that allows them to innovate, collaborate and communicate faster.

Ingram Micro recommends Microsoft® software

Millennials and more

Although millennials are seen as the drivers of change, employees of all ages are adopting new working patterns.

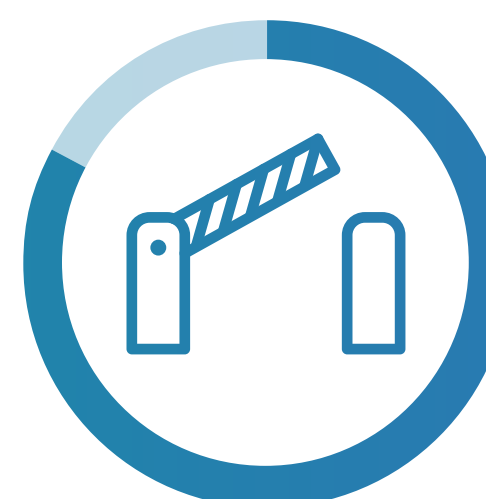

41%

aged 35 to 44 want Skype and IM tools

60%

aged under 35 want to be able to work from home

84%

of employees face barriers that stop them innovating

Expand beyond the office walls

Remote and flexible working is here to stay

76% of employees say they want flexible working hours, while almost half of the UK's workforce don't have the option to work from home.

Protect corporate assets

Username and password serve as the main gatekeepers in the place of work

72% of employees

state that their organisation only uses "username and password" to keep IT operations secure, while only 2% of employees use facial recognition tools for security.

Employees are overconfident about the use of security

Over 60%

of employees believe that their employer does more than enough to adequately secure IT operations, even though over 72% of employees say "username and password" is the main security measure.

Nurture the environment for innovation

Only a quarter of employees find innovation in a workplace is easy

35% of employees say that they find innovation easy. With 53% of under 35s blaming team dynamics and senior management as a barrier to innovation.

Limited budget and lack of time block innovation in a workplace

Over 50% of employees find lack of time and limited budget restricts them from innovating at work.

Make technology matter

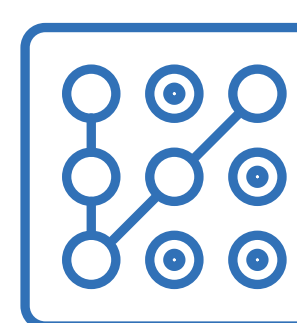

Companies investment in technology doesn't meet their employees' expectations

Over a quarter of employees feel that their employer doesn't invest enough in technology that will benefit the business.

The future of work is AI

Over a quarter of employees expect AI and machine learning to make the biggest impact in the workplace in the next five years.

Big data will continue to play a vital role in the future of work

A quarter of employees think big data will transform the way they work in the next five years which is expected to enhance productivity across teams.
